Exercises

1. Create a new directory called workbench in your home directory.

2. Without changing directories create a file called readme.txt inside of workbench.

3. Append the numbers 1, 2, and 3 to readme.txt so that each number appears on it's own line.

4. Print readme.txt to the command line.

5. Use output redirection to create a new file in the workbench directory called list.txt which lists the files and folders in your home directory.

6. Find out how many characters are in list.txt without opening the file or printing it to the command line.

Mark as completed
